Couplertec Electronic Rustproofing

Dear Allan,

I am pleased to provide the following testament to your product.

Rust has always been a major issue for our vehicles due to the highly corrosive environment in which our vehicles operate on a daily basis in and around our Salt fields and refinery. We would normally start to see rust appearing on brand new vehicles between 8 and 14 months of use and by the time our vehicles are between 18 and 24 months of age we were having to dispose of them.

In 2013 we started a trial with your Couplertec System on a brand new Ford Ranger, this vehicle is now three years of age and is still in great condition with no signs of rust. This is a fantastic result for us and we are now fitting your Couplertec systems to all of vehicles including our heavy machinery.

I am happy to recommend Couplertec to anyone looking for a solution to their rust problems.

Yours sincerely,

Colin Hay  
Site Manager
