Re: Couplerlec Electronic Rustproofing Systems

To Whom It May Concern,

Mac's Engineering has been installing Couplerlec Electronic Rustproofing Systems on BHP-Billiton Mitsubishi Alliance Coal Mining vehicles since the year 2000.

With now approximately 3,800 vehicles fitted with Couplerlec Systems, they are still proving to be the best Rust Proofing method for controlling corrosion in this highly corrosive environment.

The leasing company "Orix" who supply these vehicles for BMA Mines are the driving force behind the scene to ensure all their leased vehicles are protected from corrosion by having a Couplerlec Electronic Rustproofing System installed.

A quote from Darren Mills from Orix Vehicle Leasing sums it up.

"These vehicles fitted with a Couplerlec System are saving us a lot of money, we now insist that all our vehicles going to these mine sites have this product installed before they become exposed to the highly corrosive environment of Black Coal."

Mac's built mining vehicles are a quality built vehicle and Couplerlec Electronic Rustproofing Systems are ensuring they stay that way.

A handwritten signature in blue ink, appearing to read "Ross".
